NAME

    acme, win, awd — interactive text windows

SYNOPSIS

    acme [-ab] [-c ncol] [-f varfont] [-F fixfont] [-l loadfile | file ...]

    win [command]

    awd [label]

DESCRIPTION

Acme manages windows of text that may be edited interactively or by external programs. The interactive interface uses the keyboard and mouse; external programs use a set of files served by acme; these are discussed in acme(4).

Any named files are read into acme windows before acme accepts input. With the -l option, the state of the entire system is loaded from loadfile, which should have been created by a Dump command (q.v.), and subsequent file names are ignored. Main files display as text; directories display as columnated lists of the names of their components, as in ls -p directory/mc except that the names of subdirectories have a slash appended.

The -f (-F) option sets the main font, usually variable-pitch (alternate, usually fixed-pitch); the default is /lib/font/bit/lucidasans/euro.8.font (.../lucm/unicode.9.font). Tab intervals are set to the width of 4 (or the value of $tabstop) numeral zeros in the appropriate font.

Windows

Acme windows are in two parts: a one-line tag above a multi-line body. The body typically contains an image of a file, as in sam(1), or the output of a program, as in an rio(1) window. The tag contains a number of blank-separated words, followed by a vertical bar character, followed by anything. The first word is the name of the window, typically the name of the associated file or directory, and the other words are commands available in that window. Any text may be added after the bar; examples are strings to search for or commands to execute in that window. Changes to the text left of the bar will be ignored, unless the result is to change the name of the window.

The Emacs Editor

Emacs is the extensible, customizable, self-documenting real-time display editor. This manual describes how to edit with Emacs and some of the ways to customize it; it corresponds to GNU Emacs version 26.0.50.

If you are reading this in Emacs, type 'h' to read a basic introduction to the Info documentation system.
